

# *Turning Table*

Turning Table is a highly satisfactory and cost effective way of producing sub components, walls, or complete houses for that matter. The table comes in the following lengths: 12 m, 10m and 8 m. Wall height can be adjusted from 2200 mm to 3800 mm and is pneumatically aligned to ensure each wall is assembled straight.

When the front of the wall has been produced and covered with cladding, you just pull the lever on the working table. The wall is then transferred to the neighbouring table, with the unfinished side facing upwards. While you are working on the back of the wall, a new wall can be assembled on the first table.
